Green claims

New criteria to stop companies from making misleading claims about environmental merits of their products and services.

With a [proposed new law on green claims](#), the EU is taking action to address greenwashing and protect consumers, and the environment.

Ensuring that environmental labels and claims are credible and trustworthy will allow consumers to make better-informed purchasing decisions. It will also boost the competitiveness of businesses striving to increase the environmental sustainability of their products and activities.

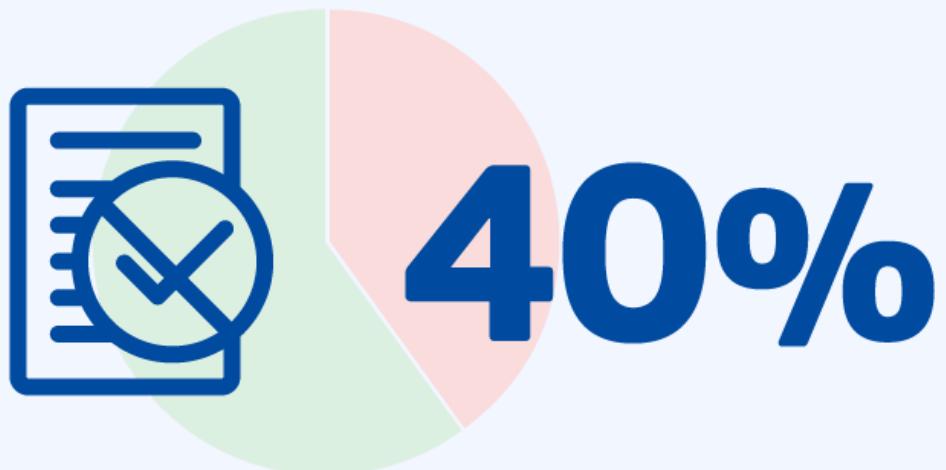

53% of green claims give vague, misleading or unfounded information

230

There are 230 sustainability labels and 100 green energy labels in the EU, with vastly different levels of transparency

Objectives

The proposal on green claims aims to

- make green claims reliable, comparable and verifiable across the EU
- protect consumers from greenwashing
- contribute to creating a circular and green EU economy by enabling consumers to make informed purchasing decisions
- help establish a level playing field when it comes to environmental performance of products

Key measures

To ensure consumers receive reliable, comparable and verifiable environmental information on products, the proposal includes

- clear criteria on how companies should prove their environmental claims and labels
- requirements for these claims and labels to be checked by an independent and accredited verifier and
- new rules on governance of environmental labelling schemes to ensure they are solid, transparent and reliable

The proposal targets **explicit claims** that

- are made on a voluntary basis by businesses towards consumers,
- cover the environmental impacts, aspects or performance of a product or the trader itself
- are not currently covered by other EU rules

Some examples of green claims are:

"Packaging made of 30% recycled plastic"

"Company's environmental footprint reduced by 20% since 2015"

"CO2 emissions linked to this product halved as compared to 2020"

 March 2022

Commission adopts proposal for a Directive on Empowering Consumers for the Green Transition

The [proposal](#) aims to ensure consumers get adequate information on products' durability and reparability before purchasing a product. It will strengthen consumer protection against untrustworthy or false environmental claims.

Related policies

As part of the European Green Deal, one of the actions of the [Circular Economy Action Plan](#) is a proposal for companies to substantiate their environmental claims using robust, science based and verifiable methods.

The green claims proposal is closely linked to other EU policies

- [empowering consumers for the green transition](#)
- [ecodesign for sustainable products](#)
- the [farm to fork strategy](#) and the [related legislative framework for sustainable food systems](#)

All these initiatives seek to establish a coherent policy framework to help the EU to make sustainable goods, services and business models the norm and to transform consumption patterns in a more sustainable direction. They aim to significantly reduce the environmental footprint of products consumed in the EU and contribute to the overall policy objective of EU climate neutrality by 2050.
